Abstracts

The global Sign Language Interpretation Apps market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Sign language interpretation apps are digital applications designed to facilitate communication between individuals who use sign language and those who may not be familiar with or proficient in sign language. These apps typically utilize video technology to capture and interpret sign language gestures, translating them into written or spoken language. Users can input sign language expressions through the device's camera, and the app processes the visual information to generate corresponding text or speech. Conversely, the apps may also convert spoken or written language into sign language gestures for users who are deaf or hard of hearing. Sign language interpretation apps play a crucial role in fostering inclusive communication, breaking down language barriers, and providing accessibility for individuals with hearing impairments in various contexts, such as educational settings, healthcare, and everyday interactions.
