Abstracts

The global Silage Corn Seed market size is expected to reach \$ 8979 million by 2032, rising at a market growth of 3.5% CAGR during the forecast period (2026-2032).

The corn seed is a propagator with a capacity to grow into maize, which is formed by pollination and fertilization. Silage is fermented, high-moisture stored fodder which can be fed to cattle, sheep and other such ruminants (cud-chewing animals) or used as a biofuel feedstock for anaerobic digesters. It is fermented and stored in a process called ensilage, ensiling or silaging, and is usually made from grass crops, including maize, sorghum or other cereals, using the entire green plant (not just the grain). Corn silage is a high-quality forage crop that is used on many dairy farms and on some beef cattle farms in Tennessee. Its popularity is due to the high yield of a very digestible, high-energy crop, and the ease of adapting it to mechanized harvesting and feeding. Corn for silage fits ideally into no-till and double-cropping programs.

Global Silage Corn Seed key players include Corteva Agriscience, Bayer, KWS, Syngenta, Limagrain, etc. Global top five manufacturers hold a share over 50%. China is the largest consumption market, with a share about 90%, followed by Southeast Asia, with a share about 5 percent. In terms of product, Non-GMO is the largest segment, with a share about 60%. And in terms of application, the largest application is Farm Planting, followed by Personal Planting.
