Abstracts

KH-602 is a colorless, strongly alkaline liquid with amine smell being very sensitive to hydrolysis. KH-602 is a diamino-functional silane capable of providing good adhesion and superior elongation and flexibility at the polymer-substrate interface. It is used to promote adhesion between glass, mineral and metal surfaces-reinforcements, fillers and substrates-and resins that react with amino groups in systems such as PVC plastisol, polyurethane, or epoxy-based adhesives and sealant, or in phenolic and epoxy molding compounds. Its reduced alkoxy functionality might also be useful in waterborne systems such as latex coatings, adhesives and sealants, providing lower reactivity and therefore higher stability in the aqueous environment.

This report studies the global Silane Coupling Agent KH-602 production, demand, key manufacturers, and key regions.
