Abstracts

The global Silane Coupling Agent KH-792 market size is expected to reach \$ 598 million by 2032, rising at a market growth of 4.3% CAGR during the forecast period (2026-2032).

Silane coupling agent KH-792 is an industrial grade of aminoethylaminopropyltrimethoxysilane, belonging to the category of diamino functional organic silane coupling agents. Its molecule contains both hydrolyzable trimethoxysilane groups and two reactive amino functional groups, which can form stable silicon oxygen bonds on the surface of inorganic materials and undergo chemical reactions with organic resin systems, significantly improving interfacial bonding strength and overall material properties. In 2025, global Aminoethylaminopropyltrimethoxysilane production reached approximately 33.67 K MT, with an average global market price of around US\$ 12,856 per MT.

KH-792 belongs to an important sub category of amino silane coupling agents, with a relatively medium market size but stable demand, presenting typical 'function driven+application dispersed' characteristics.

From the perspective of demand structure, its main consumption is concentrated in the fields of adhesives and coatings, benefiting from the continuous improvement demand for adhesive performance and durability in construction, automotive, and industrial materials, and possessing strong rigid application properties; The composite materials and electronics fields provide incremental demand, especially in the high-performance materials field where the dependence on interface modification is constantly increasing.

From the perspective of competitive landscape, the technological barriers in the industry

are mainly reflected in the organic silicon synthesis process, purity control, and application formula capabilities. The high-end market is dominated by enterprises with scale and technological advantages, while the competition in the mid to low end market is more intense and price sensitive.

From the perspective of development trends, on the one hand, downstream material systems are upgrading towards high performance and long lifespan, promoting the development of KH-792 towards high purity and specialization; On the other hand, the promotion of environmental regulations and water-based systems has increased their importance in low VOC formulations. Overall, the growth pace of the KH-792 market is basically synchronized with the coatings, adhesives, and composite materials industries, maintaining stable growth in the short term and having certain room for improvement in the medium to long term driven by new materials and high-end manufacturing.
