SILAR coating system, full name Sequential Ionic Layer Adsorption and Reaction coating system, is a modern thin film deposition method, also known as an improved version of chemical bath deposition. In this technology, the thin film is deposited on a substrate (such as a glass substrate) according to the chemical technology of continuous ion layer adsorption and reaction. This technology involves immersing the substrate in a given solution and deionized water multiple times, and gradually building the desired film through the adsorption and reaction of ions on the substrate surface with the solution.
