Silent Servo Hydraulic Power Units provides a hydraulic power source for the servo hydraulic test system. It converts electrical energy into high-pressure hydraulic energy through the high-speed rotation of the motor and the oil pump. The oil pump continuously runs to output high-pressure oil to provide power for the servo hydraulic test system. To ensure that the hydraulic oil source provides a stable hydraulic environment, a micron filter is set to filter the hydraulic oil during the transportation and recovery process. At the same time, the temperature of the oil is controlled through the circulating cooling system to ensure that the oil entering the servo hydraulic test system is always in the optimal operating temperature range of the servo valve and actuator.
