Silent thyroiditis is an autoimmune reaction that affects the thyroid gland. Hyperthyroidism can occur first, followed by hypothyroidism. The first indications of silent thyroiditis are fatigue, increased appetite, palpitations, weight loss, muscular cramps, and mood changes caused by an overactive thyroid gland. Fatigue, constipation, dry skin, weight gain, and cold intolerance are later signs of silent thyroiditis that occur due to an underactive thyroid (hypothyroidism). Silent thyroiditis usually resolves on its own within a year. The acute phase lasts three months.
