Abstracts

The global Silica for High-Performance Green Tire market size is expected to reach \$ 919 million by 2032, rising at a market growth of 7.9% CAGR during the forecast period (2026-2032).

In 2025, global production of silica for high-performance green tires reached 367,000 tons, with an average selling price of \$1,450 per ton. Silica for high-performance green tires refers to highly dispersible precipitated silica utilized in the tread rubber systems of green and high-performance tires. It is typically used in conjunction with silane coupling agents, S-SBR, and BR to reduce tire rolling resistance, enhance wet grip, and maintain superior wear resistance. Its primary applications are found in passenger car tires, EV tires, high-performance tires, and energy-efficient commercial vehicle tires. The upstream sector primarily comprises raw materials such as quartz sand, soda ash, sulfuric acid, sodium silicate, as well as energy inputs including steam and electricity, and packaging materials. The midstream sector consists of precipitated silica manufacturers; the production process typically involves sodium silicate preparation, precipitation reactions, filtration and washing, drying, granulation, surface treatment, and packaging. The downstream sector is dominated by tire manufacturers, with end-market demand stemming from the passenger vehicle, commercial vehicle, new energy vehicle, replacement tire, and original equipment (OE) tire markets. Gross margins range from approximately 20% to 40%.
