Abstracts

The global Silica for Low Rolling Resistance Green Tires market size is expected to reach \$ 919 million by 2032, rising at a market growth of 7.9% CAGR during the forecast period (2026-2032).

In 2025, global production of silica for low rolling resistance green tires reached 367,000 tons, with an average selling price of \$1,450 per ton. Silica for low rolling resistance green tires refers to highly dispersible precipitated silica used in the tread compound systems of green tires and high-performance tires. It is typically used in conjunction with silane coupling agents, S-SBR, and BR to reduce tire rolling resistance, enhance wet grip, and maintain excellent wear resistance. Its primary applications are found in passenger car tires, EV tires, high-performance tires, and energy-efficient commercial vehicle tires. The upstream sector primarily comprises raw materials such as quartz sand, soda ash, sulfuric acid, and sodium silicate, as well as energy inputs including steam, electricity, and packaging materials. The midstream sector consists of precipitated silica manufacturers; the production process typically involves sodium silicate preparation, precipitation reactions, filtration and washing, drying, granulation, surface treatment, and packaging. The downstream sector is dominated by tire manufacturers, with end-market demand stemming from passenger cars, commercial vehicles, new energy vehicles, and both replacement and original equipment (OE) tire markets. Gross margins range from approximately 20% to 40%.
