Abstracts

According to our (Global Info Research) latest study, the global Silica Powder Concrete market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Silica fume concrete is a kind of high-performance concrete added with silica fume when producing concrete, and each index of concrete quality is several times higher than that of the traditional concrete without silica fume. The addition of silica fume can change some important physical performance indexes of concrete. According to the observation under the electron microscope, there is crystal growth in the voids of the cement paste of the concrete mixed with silica fume. Silica fume particles can fill the pores of relatively large cement particles, reducing the volume of pores. However, the large specific surface area of silica fume has greater influence on the workability.
