According to our (Global Info Research) latest study, the global Silica Sand (Over 70 Mesh) market size was valued at US$ 30130 million in 2025 and is forecast to a readjusted size of US$ 44840 million by 2032 with a CAGR of 5.9% during review period.

Silica sand is a granular material derived from the erosion and weathering of rocks rich in silica. It is primarily composed of quartz crystals, one of the most abundant and widely distributed minerals on earth. It is a natural resource that is available in various forms, including rounded grains, angular particles, or even sandstone. Silica sand is widely used in a wide range of industrial applications, the construction sector, glass manufacturing, and the production of silicon wafers in the electronics sector. This report focus on Silica Sand (Over 70 Mesh) market.

High-purity silica sand is in high demand in advanced applications, including the electronics industry, where it is used to produce semiconductor wafers, a crucial Type in electronic gadgets. High-purity silica sand is required to manufacture specialty glass types such as optical fibres for telecommunications and high-performance laboratory glassware. Research into using recycled glass as a partial alternative for virgin silica sand in glass manufacture provides a sustainable approach. This can help lessen reliance on virgin resources while potentially lowering production costs.
