Abstracts

The global Silica Welding Blanket market size is expected to reach \$ 174 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Silica welding blankets are high-temperature resistant blankets made of woven silica fibers. They are used to protect personnel and equipment during welding, cutting, and heat processing operations, preventing injuries from sparks, molten metal, and high-temperature spatter. They are widely used in industrial workshops, construction sites, and metal processing plants. The upstream of the industry chain includes silica fibers, binders, and high-temperature coatings; the midstream includes weaving, coating, cutting, and quality inspection; and the downstream is used in metal processing plants, shipyards, construction sites, and welding workshops, along with supporting industrial safety and protection services. In 2025, the global production of silica welding blankets was approximately 3 million units, with an average market price of approximately US\$40 per blanket. The gross profit margin of major companies in the industry is between 25% and 40%. Global production capacity in 2025 was approximately 4 million units.

The silica welding blanket market is driven by increasing industrial safety regulations, rising awareness of workplace hazards, and growth in metal fabrication, construction, and shipbuilding industries. Technological advances in silica fiber production and coating processes improve durability and heat resistance. The market is characterized by steady demand for protective equipment in welding and cutting operations. Growth is supported by industrial safety compliance, recurring replacement needs, and the expansion of industrial workshops worldwide. Emerging markets with growing manufacturing sectors present additional opportunities.

This report studies the global Silica Welding Blanket production, demand, key
