Abstracts

The global Silicafumes market size is expected to reach \$ 438 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

Silicafumes, also known as micro silica, is an ultrafine powder collected as a by-product of the silicon and ferrosilicon alloy production. Silica fume is an ultrafine material with spherical particles less than μm in diameter, the average being about 0.15 μm . So it also called the ultrafine silica fume. In 2025, global silicafumes sales reached approximately 1,500 kilotons with an average price of 200 US\$/ton.

Market growth for silicafumes is primarily driven by increasing demand for high-performance concrete in infrastructure modernization, including bridges, tunnels, marine structures, and large industrial facilities that require superior strength, durability, and corrosion resistance. Supply is closely tied to upstream silicon and ferrosilicon smelting, while environmental regulations encouraging by-product utilization further support its adoption. In addition, low-carbon construction trends promote the use of supplementary cementitious materials to partially replace cement and reduce CO₂ emissions, and expanding applications in oil-well cementing, refractories, and repair materials are contributing to sustained demand for high-quality silicafumes.

This report studies the global Silicafumes production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Silicafumes and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
