Abstracts

The global Silicate Grouts market size is expected to reach \$ 839 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

Silicate grouts are low-viscosity injection materials built around sodium silicate (water glass) or colloidal silica (nano-silica sol) that gel on demand via acid/salt activation or dedicated activators, enabling permeation grouting for sands and fissured rock, water cut-off curtains, and pre/post-injection in underground works; they are valued for water-like penetrability and adjustable gel time. In 2025, Global silicate grouts annual sales are about 420 kilotons, with an average ex-factory price of roughly USD 1,450/ton, capacity around 650 kilotons/year, and a materials gross margin of about 18%–30%.

Upstream supplies soda ash/caustic soda/silica sand and colloidal silica feedstocks, midstream formulates and packs silicate/silica-sol grouting systems (including accelerators/activators), and downstream demand comes from underground construction, ground improvement, hydraulic works and environmental containment grouting.

This report studies the global Silicate Grouts production, demand, key manufacturers, and key regions.
