## Abstracts

According to our (Global Info Research) latest study, the global Silicates for Concrete Floor Treatment market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

High-end lithium based silicates and economical potassium & sodium silicates are usually used in various concrete and finishing applications. These silicates are used as floor hardener and polisher in industrial sheds, corporate buildings, warehouses etc. to reduce dust formation and increase the durability of the surface.

Application of silicates produces calcium-silicate-hydrate, which fills the pores to densify the concrete floors thereby decreasing the porosity and increasing the strength. Silicates can be applied to existing and new concrete surfaces.

As silicates are hydrophobic in nature, a thin coat on general masonry or unpainted plaster will work as a waterproofing treatment plaster.

Asia-Pacific key players of Silicates for Concrete Floor Treatment include PQ Corporation, VanBaerle, Nippon Chemical Industrial, Xi'an Tongxin, Noble Alchem and Kiran Global Chem, etc. Top three players occupy for a share about 33%. China is the largest market, with a share about 53%, followed by Japan and India. In terms of product, Lithium Silicate is the largest segment, with a share over 48%.
