Abstracts

The global Silicomanganese market size is expected to reach \$ 24206 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

Silico manganese which is sometimes called ferrosilicon manganese, is ferroalloy composed of manganese, silicon and iron, produced by smelting manganese ore, manganese slag, and coke and quartz flux on high temperature. Mainly silicomanganese contains smaller proportion of minor elements, such as carbon, phosphorous and sulfur. Manganese and silicon are crucial components in steelmaking. As deoxidizers and desulfurizers they improve mechanical properties of steel. Global Silicomanganese market in 2025 is estimated at around 20,000 kilotons, with an average factory selling price of approximately USD 950 per ton. The value chain of Silico Manganese mainly consists of upstream manganese ore, coke or semi-coke, quartz, dolomite, etc.

The silico manganese market is primarily driven by a combination of factors: global steel output, the proportion of integrated steelmaking (blast furnace-basic oxygen furnace routes), manganese ore costs, electricity prices, and demand from the infrastructure and manufacturing sectors. The steel industry remains the core downstream market for silicomanganese; while new steelmaking capacity in regions such as India, Southeast Asia, and the Middle East generates incremental demand, controls on Chinese steel output and a weakening real estate sector dampen global demand elasticity. Furthermore, as silicomanganese production is highly energy- and ore-intensive, costs are sensitive to fluctuations in the prices of manganese ore, coke, and electricity; consequently, supply shifts from major manganese-producing regions (South Africa, Australia, and Gabon) and electricity price volatility in China, India, and Europe directly impact production rates and market prices. While the transition to 'green steel' will not

replace silicomanganese in the short term, it will drive increased demand for low-carbon smelting processes, electric arc furnace (EAF) steel production, and low-carbon silicomanganese products.

This report studies the global Silicomanganese production, demand, key manufacturers, and key regions.
