Abstracts

According to our (Global Info Research) latest study, the global Silicon Anode Material market size was valued at USD 412.6 million in 2023 and is forecast to a readjusted size of USD 4368.7 million by 2030 with a CAGR of 40.1% during review period.

Silicon has been recognized as a one of the most promising anode materials to replace currently used graphite in the anodes of Li-ion batteries due to its high gravimetric theoretical lithium storage capacity. Fast charging is feasible due to the high porosity inherent to silicon anode solutions, while costs can be reduced because of silicon materials' high capacity, which results in lower material requirements. Silicon anodes are also considered safer because they help reduce the risk of lithium plating and dendrite formation, even though cycle and calendar life may need to be further demonstrated.

Global core silicon anode material manufacturers include BTR, Shin-Etsu Chemical, Daejoo Electronic Materials etc. The top 1 company hold a share about 50%. Asia-Pacific is the largest market, with a share about 80%, followed by Europe and North America with the share both about 8%.
