According to our (Global Info Research) latest study, the global Silicon Carbide for AR Glasses market size was valued at US\$ 106 million in 2024 and is forecast to a readjusted size of USD 610 million by 2031 with a CAGR of 27.9% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The high thermal conductivity of silicon carbide material enables AR glasses to simplify the heat dissipation design and achieve lightweight design. Traditional AR glasses rely on temple heat dissipation modules or active cooling systems, which increase the weight and complexity of the equipment. The high thermal conductivity of silicon carbide allows the heat dissipation function to be integrated into the optical waveguide itself, and the demand can be met through passive heat dissipation. In addition, the excellent heat dissipation performance leaves redundancy for improving the integration of AR glasses and configuring more sensors.
