According to our (Global Info Research) latest study, the global Silicon Carbide Dummy Wafer market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Silicon Carbide Dummy Wafer is a silicon virtual wafer mainly used for experiments and testing, which is different from general product wafers. During each process, virtual silicon wafers were used to measure film thickness, pressure resistance, reflection index and the presence of pinballs. In addition, virtual wafers are used for pattern size measurement, defect inspection, etc. in lithography.

According to our Semiconductor Research Center, in 2022, the global SiC wafer was valued at US\$ 750 million, will grow rapidly in next six years, driven by the strong demand from electric vehicle (EV). Currently the 6 inch SiC substrates are dominating this market, and in next six years, more players will put into production the 8 inch SiC wafers. Currently the key players of SiC are mainly located headquartered United States, Europe, Japan and China, especially in China, more companies are entering the SiC market. It is predicted that, Chinese companies will play key roles in the SiC market in next ten years.
