According to our (Global Info Research) latest study, the global Silicon Carbide Schottky Rectifiers market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The silicon carbide Schottky rectifier is a power electronic device, which is made of silicon carbide material compared with the traditional silicon material Schottky diode. The main advantages of silicon carbide materials are higher breakdown electric field strength and thermal conductivity, as well as lower on-resistance and reverse recovery time, making silicon carbide Schottky diodes have lower switching losses, higher switching speed and higher operating temperature. Due to these advantages of SiC Schottky diodes, they are widely used in power conversion systems with high efficiency, high power density, and high temperature environment, such as motor drives, electric vehicles, solar inverters, industrial frequency converters, etc. Silicon carbide Schottky diodes can also be used to replace traditional silicon PN junction diodes to improve power supply efficiency and reduce power supply volume and weight.
