SCR power supplies use internal control and monitoring circuits to provide quick response to variations in the load. SCR power supplies can also be used to power DC motors. An SCR power controller is combined with a diode-style rectifier to operate a DC motor that is rated at 250 HP or less. The SCR controlled power supply is suitable for demanding manufacturing environments and typically comes in wide range of power levels and frequencies, depending upon the system's power requirements. SCR power supplies range in frequency from 80 Hz to 6 kHz, and in power level from 50 kilowatts up to 3 megawatts. SCR power supplies use an AC rectifier to convert incoming AC voltage to a constant current level, providing a reliable and efficient power system for demanding process environments.
