The global Silicon Element Diaphragm Pressure Sensor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Silicon element diaphragm pressure sensor is a common pressure sensor, its principle is to use the strain effect of silicon wafer (ie silicon element) to realize the measurement of pressure. Silicon element diaphragm pressure sensors are usually composed of a pressure sensor module and a signal conversion circuit, which can convert the measured pressure into a standard electrical signal output. This kind of sensor has been widely used in many application fields because of its simple structure, fast response speed, and high sensitivity.
