## Abstracts

The global Silicon Monoxide market size is expected to reach \$ 341 million by 2032, rising at a market growth of 10.7% CAGR during the forecast period (2026-2032).

Silicon monoxide, SiO, is an amorphous solid which does not have a characteristic X-ray diffraction pattern. SiO is brown in powder or pressed form and black in granular or lump form. It is stable at room temperature, but at temperatures of 400-800°C, X-ray readings show traces of the disproportionation products silicon and quartz. SiO is a highly desirable coating material due to its high deposition rate and ease of evaporation using low cost resistance-heated coating systems. SiO is also noted for its excellent environmental stability.

The major manufacturers of silicon monoxide are Materion, Osaka Titanium Technologies, EMD Performance Materials (Merck), etc., with the top three accounting for about 40%.

Japan is the main market at about 30%, followed by China at about 25%.

This report studies the global Silicon Monoxide production, demand, key manufacturers, and key regions.
