According to our (Global Info Research) latest study, the global Silicon Nitride Electronic Substrate market size was valued at US\$ 48.4 million in 2024 and is forecast to a readjusted size of USD 485 million by 2031 with a CAGR of 39.5% during review period.

The Silicon Nitride Electronic Substrate mainly uses the insulating properties and thermal conductivity of silicon nitride. Very large-scale integrated circuits, electronic chips, etc., due to the large amount of calculation and large heat generation, the requirements for insulation and heat dissipation are getting higher and higher, and the silicon nitride electronic substrate is excellent in solving this problem.

Silicon nitride membranes play a crucial role in various nanotechnology applications, including atomic force microscopy (AFM) and nanoindentation. They provide a stable and flat surface for studying nanoscale phenomena and performing precise measurements. Silicon nitride support membranes find use in biological research, particularly for imaging and analysis of biological macromolecules and cellular structures. Their minimal interference with samples is advantageous in preserving the natural state of biological specimens.
