Silicon Photonic technology is a low-cost, high-speed optical communication technology based on silicon photonics. It uses CMOS microelectronics technology based on silicon materials to realize the integrated preparation of photonic devices. This technology combines the ultra-large-scale logic and ultra-high precision of CMOS technology. The characteristics of manufacturing and the advantages of ultra-high speed and ultra-low power consumption of photonic technology. Silicon photonics technology shrinks and integrates a large number of optical and electrical components that were originally separate devices into an independent microchip, achieving high integration, low cost, and high-speed optical transmission.
