According to our (Global Info Research) latest study, the global Silicon Photonics Modules market size was valued at USD 960.4 million in 2023 and is forecast to a readjusted size of USD 7340.3 million by 2030 with a CAGR of 33.7% during review period.

The silicon photonics module is based on silicon photonics integration technology and uses industry-leading chips. It changes the layout of traditional discrete devices and greatly simplifies the design and manufacture of optical modules, which are mainly used in data center networks to increase the bandwidth from 100G to 400G. Silicon photonics technology will eventually move towards photoelectric integration (OEIC: Opto-Electric Integrated Circuits), making the current split photoelectric conversion (optical module) into a local photoelectric conversion in photoelectric integration, and further promoting the integration of the system.

Global top 3 companies of silicon photonics modules, including Intel, cisco systems and InPhi, are the leaders of the industry and took up about 97% of the global market. North America holds the major share in the market, with a share of 97%. On the basis of product type, 100G silicon photonic transceiver represent the largest share of the worldwide silicon photonics modules market, with 87% share.
