## Abstracts

The global Silicon Powder market size is expected to reach \$ 438 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

Silicon powder (also called silica fume or microsilica) is an ultrafine powder by-product generated during the production of industrial silicon or ferrosilicon, consisting primarily of amorphous silicon dioxide (SiO<sub>2</sub>). With extremely high surface area and pozzolanic reactivity, it is widely used as a high-performance supplementary cementitious material in concrete and cement-based systems. In 2025, global silicon powder sales reached approximately 1,500 kilotons with an average price of 200 US\$/ton.

The silicon powder market is primarily driven by increasing demand for high-performance concrete in large-scale infrastructure, marine engineering, high-rise construction, and transportation projects requiring superior strength and durability. Growing emphasis on low-carbon building materials and sustainable construction also promotes the use of supplementary cementitious materials to partially replace cement and reduce CO<sub>2</sub> emissions. Supply is closely tied to industrial silicon and ferrosilicon production, while expanding applications in prefabricated construction, nuclear facilities, hydraulic engineering, and structures exposed to harsh environments continue to stimulate demand for high-quality silica fume.

This report studies the global Silicon Powder production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Silicon Powder and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and
