According to our (Global Info Research) latest study, the global Silica Aerogel Particles market size was valued at USD 51 million in 2023 and is forecast to a readjusted size of USD 67 million by 2030 with a CAGR of 3.9% during review period.

Aerogel is a synthetic porous ultralight material derived from a gel, in which the liquid component of the gel has been replaced with a gas. The result is a solid with extremely low density and low thermal conductivity.

Silica aerogel is the most common type of aerogel, and the most extensively studied and used. It is silica-based, derived from silica gel. The lowest-density silica nanofoam weighs 1,000 g/m³, which is the evacuated version of the record-aerogel of 1,900 g/m³. Silica aerogels also have a high optical transmission of ~99% and a low refractive index of ~1.05.
