According to our (Global Info Research) latest study, the global Silicon Wafer Reclaim Reagent market size was valued at US\$ 5659 million in 2025 and is forecast to a readjusted size of US\$ 8171 million by 2032 with a CAGR of 5.4% during review period.

In 2025, global sales volume of Silicon Wafer Reclaim Reagent was approximately 2.2 million tons, with an average global market price of about USD 2,500 per ton. The gross margin of major manufacturers was generally around 18%-35%.

Silicon Wafer Reclaim Reagent is a functional chemical material used for surface cleaning, rework and reclaim treatment of silicon wafers/silicon-based wafers. Through acidic, alkaline, oxidative, complexing and surfactant-based chemical mechanisms, it removes particles, organic residues, metal ions, oxide layers, slicing residues, polishing residues and process contaminants from wafer surfaces, thereby improving wafer surface cleanliness and compatibility with subsequent processes.

Its upstream mainly include high-purity acids, high-purity alkalis, hydrogen peroxide, complexing agents, surfactants, corrosion inhibitors, chelating agents, ultrapure water and electronic-grade packaging materials. Downstream, it is mainly used in the semiconductor and photovoltaic industries. The semiconductor segment has higher requirements for metal ion, particle and organic residue control, resulting in higher product value, while the photovoltaic segment has larger consumption volume but stronger price sensitivity. The industry's value is mainly concentrated in high-purity raw material control, impurity testing, formulation stability, customer process qualification and batch-to-batch consistency.
