## Abstracts

According to our (Global Info Research) latest study, the global Silicone 60 market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Silica gel 60 (Meckosorb Si60) is a specific silica gel product with a series of unique physical and chemical properties. Silica gel 60 is a white fine powder with an irregular porous structure. There are a variety of options for its average particle size, including 5 $\mu$ m, 10 $\mu$ m, 20 $\mu$ m and 30 $\mu$ m. These silica gel 60 with different particle sizes can meet the needs of different application scenarios. Silica gel 60 has a high pore volume, usually reaching 0.75ml/R, which gives it excellent adsorption capacity and storage performance. Its specific surface area reaches 500m<sup>2</sup>/R, which is one of the important indicators for measuring the adsorption performance of silica gel. The high specific surface area means that silica gel 60 can more effectively adsorb and separate the target substance. The average pore size of silica gel 60 is about 6nm, which makes it suitable for the adsorption and separation of molecules or particles of a specific size.
