The global Silicone Coated Resistor market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A silicone-coated resistor is a resistor whose resistive element is covered with a layer of silicone. The introduction of silicone coating gives resistors some special properties and protective properties. The silicone coating acts as a protective layer, protecting the resistor from external environmental factors such as moisture, dust, chemicals, and corrosive substances. This is especially important for resistors used in harsh conditions.
