Abstracts

Silicone composite insulators are composed of glass fiber epoxy resin lead rods, silicone rubber sheds, and hardware. It can effectively use the narrow corridor to open voltage and power transmission, suitable for urban network technology transformation, can reduce the height of the tower, can save a lot of manpower, material and financial resources, due to its high bending strength, it can prevent the cascading of porcelain crossarms that are prone to occur. Fracture accidents are irreplaceable products of porcelain crossarms; small size, light weight, strong shock and impact resistance, and no need for manual cleaning, providing a guarantee for safe operation.
