## Abstracts

Silicone is a high-performance material used in various heavy machinery in the form of resin, elastomers (adhesives, sealants), gels, and fluids. Silicone elastomer is classified into liquid silicone, high temperature silicone, and room temperature silicone rubber. Silicone rubber consists of alternating oxygen and silicon atoms, and based on the bonding between oxygen and silicon atoms, it can be found in various shapes.

Most of the silicone elastomers possess thermoset properties whereas other elastomers possess thermoplastic properties. Silicone elastomer and fluid silicone used in high voltage applications can operate at temperature up to 350°–400° F. In addition, silicone fluids are widely used as transformer oil and circuit breaker oil in power stations.
