The global Silicone Light Diffusion Microspheres market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Silicone light diffusion microspheres are polymer microspheres with a three-dimensional structure connected by silicon-oxygen bonds. They have excellent optical properties, dispersion, lubricity, heat resistance and other characteristics. It can be used in LED lampshades, LCD light diffusion plates and light diffusion films, cosmetics, paints and coatings, plastic additives and other fields. Through the difference in refractive index with different substrates, the light source is scattered and soft light is produced. Silicone light-diffusing microspheres are an organic light-diffusing agent and an important component of optoelectronic materials.
