## Abstracts

The global Silicone Mold Release Agents market size is expected to reach $ 306 million by 2032, rising at a market growth of 4.1% CAGR during the forecast period (2026-2032).

Silicone Mold Release Agents are high-performance industrial additives primarily composed of polyorganosiloxanes (such as silicone oil and silicone resin). By forming a uniform release film between the mold and the molding material, they significantly reduce surface tension, thereby preventing sticking and ensuring the smooth release of finished products.

Upstream raw materials primarily include silicon metal, methanol, chloromethane, dimethyldichlorosilane, hydrolyzed siloxanes, DMC cyclics, low- and high-viscosity silicone oils, hydroxyl-terminated silicone oils, vinyl silicone oils, hydrogen-containing silicone oils, MQ silicone resins, modified silicone oils, and emulsifiers. The midstream sector comprises silicone material manufacturers and release agent formulators responsible for processes such as emulsification, dilution, modification, compounding, and application validation. Downstream industries mainly include manufacturers of rubber, plastics, composite materials, die-castings, food processing products, paper/film release liners, and construction materials; these sectors demand high standards regarding release stability, mold cleanliness, compatibility with post-processing, and VOC emissions.

In 2025, global sales volume is projected to reach approximately 49,000 metric tons, with an average ex-factory price of around $4,600 per metric ton; major manufacturers in the industry typically achieve gross profit margins ranging from 28% to 42%.

The growth in demand for Silicone Mold Release Agents is primarily driven by the rubber tire, plastic molding, PU foaming, food packaging, composite material, and precision molding sectors, all of which increasingly demand higher release efficiency, superior surface quality, extended mold life, and greater stability for automated continuous production. Meanwhile, water-based low-VOC products, silicone emulsions, low-migration food-contact grades, and semi-permanent release agents are replacing some traditional oil-based, wax-based, and solvent-based products. Challenges facing the industry include significant product homogenization in the low-end segment, fierce price competition for standard water-based silicone emulsions, and cyclical fluctuations in downstream rubber, plastic, and die-casting industries; additionally, some silicone release agents can interfere with subsequent processes?such as painting, printing, bonding, or lamination?necessitating validation by customers.
