According to our (Global Info Research) latest study, the global Silicone Oil Clutch market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Silicone Oil Clutch is a clutch device that uses silicone oil as the transmission medium. It differs from traditional friction clutches, which use friction plates or plates to transmit torque.

The working principle of silicone oil clutch is based on fluid dynamics. It consists of two parts: an input shaft and an output shaft, and the space between them is filled with silicone oil. As the input shaft rotates, it stirs up silicone oil, which transfers torque to the output shaft through the clutch's internal passages. Clutch operation can be adjusted by controlling the flow of silicone oil, allowing control of torque delivery.
