The global Silicone Overmoulded Services market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Silicone overmoulded services refers to the provision of manufacturing processes and expertise for creating silicone overmoulded parts or components. Silicone overmoulding is a technique where a layer of silicone is applied over an existing substrate or base material, providing additional functionalities or properties to the final product. The process typically involves injecting liquid silicone rubber (LSR) or high consistency rubber (HCR) onto the substrate, allowing it to bond and form a cohesive layer. This layer of silicone can provide benefits such as enhanced durability, improved grip or texture, electrical insulation, chemical resistance, and temperature resistance.

Silicone overmoulded services may include various stages in the manufacturing process, such as design consultation, mould fabrication, material selection, prototyping, production, quality control, and post-processing. The service provider will have expertise in handling silicone materials, understanding the properties and requirements of the substrate, and utilizing appropriate moulding techniques to achieve the desired overmoulded result.

These services are often utilized in industries such as automotive, electronics, medical devices, consumer goods, and industrial applications. By leveraging silicone overmoulding services, manufacturers can enhance their products' functionality, aesthetics, and performance while maintaining efficient production processes.
