Abstracts

The global Silicone Sponge Rubber Sheet market size is expected to reach \$ 909 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Silicone sponge rubber sheets are porous, elastic sheet materials formed by the foam-molding of a silicone rubber base. Characterized by their softness, compressibility, sealing and cushioning capabilities, resistance to extreme temperatures and weathering, electrical insulation properties, and low compression set, they are widely utilized in applications involving gaskets, seals, and thermal insulation.

The upstream supply chain primarily comprises silicone rubber polymers, reinforcing fillers, blowing agents, cross-linking agents, pigments, and adhesive backing materials. Downstream applications are predominantly found in sealing and cushioning scenarios across sectors such as electronics and electrical appliances, automotive and battery packs, rail transit, industrial equipment, outdoor enclosures, and building HVAC systems. Globally, the average unit price for silicone sponge rubber sheets stands at approximately \$10,306 per ton, with sales volumes reaching approximately 65,500 tons. The industry's annual production capacity is estimated at around 30,000 tons, maintaining an average profit margin of approximately 15%.

Looking ahead, the global market for silicone sponge rubber sheets is poised to continue its evolution toward higher performance, lightweighting, and customization. Future products will place greater emphasis on closed-cell sealing efficiency, long-term compression resilience stability, and enhanced resistance to extreme temperatures and weathering; furthermore, there will be an accelerated integration with secondary processing techniques such as adhesive backing, die-cutting, and composite

reinforcement. In terms of application, driven by demand for sealing solutions in new energy vehicle battery packs, electronics and electrical protection systems, rail transit, and outdoor equipment, the market is set to further advance toward material solutions characterized by high safety, high reliability, and comprehensive system integration.
