According to our (Global Info Research) latest study, the global Silicone Treated Fabric market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Silicone treated fabric is a type of fabric that has been coated or treated with silicone. This treatment involves applying a layer of silicone to the fabric surface, which provides various benefits such as water resistance, stain resistance, and increased durability. Silicone treated fabric offers enhanced performance and functionality compared to untreated fabrics, making it a popular choice in various industries and applications.

Silicone treated fabric is commonly used in outdoor and sportswear, as well as in industrial applications where protection against liquids, chemicals, and abrasion is required. The silicone coating creates a barrier that repels water and prevents it from penetrating the fabric, keeping the wearer dry and comfortable.

Additionally, silicone treated fabric is often used in the manufacturing of medical and healthcare products, as the silicone coating provides a hygienic and easy-to-clean surface that resists the growth of bacteria and other microorganisms.
