Abstracts

The global Silver Chloride market size is expected to reach $ 8.11 million by 2032, rising at a market growth of 5.9% CAGR during the forecast period (2026-2032).

Silver Chloride is an inorganic silver halide composed of monovalent silver and chloride ions, with the molecular formula AgCl and a molecular weight of 143.32 g/mol. It is generally supplied as a white to off-white photosensitive crystalline powder, high-purity powder, micronized material, optical crystal, sputtering target, nanoparticle dispersion, or customized silver chloride powder for electrode applications. In 2025, global Silver Chloride production reached approximately 3.9 metric tons.

The expansion of medical diagnostics, patient monitoring, and wearable biosensors is an important driver of the Silver Chloride market. Silver/silver chloride systems provide stable electrochemical potential, relatively low polarization, and reliable signal transmission, making them widely used in electrocardiography, electroencephalography, electromyography, transcutaneous electrical stimulation, disposable diagnostic electrodes, and other medical sensor products. Growth in remote patient monitoring, point-of-care testing, home healthcare, and wearable medical devices is increasing demand for Silver Chloride powders with controlled particle size, surface area, purity, and coating characteristics. Metalor’s dedicated medical-sensor portfolio demonstrates the increasingly specialized material requirements of this application.
