Silver copper oxide is a composite material consisting of silver and copper oxide, combining the excellent properties of both. Silver, as a metal with excellent conductivity, can ensure low resistance of electrical contact materials, while copper oxide has high hardness and wear resistance, which can effectively enhance the material's wear resistance. The material exhibits excellent arc resistance in electrical equipment, which can inhibit the generation and spread of arcs and extend the service life of equipment such as electrical switches and relays. The anti-welding properties of silver copper oxide also make it suitable for use in high current load environments, reducing the adhesion of contact surfaces when power is applied. Usually manufactured through powder metallurgy processes, silver copper oxide materials are widely used in low-voltage electrical appliances, switchgear and household appliance switches, especially in frequently operated electrical appliances, to ensure their operational stability and reliability.
