The silver graphite material prepared by extrusion method has the characteristics of excellent anti-welding performance, low and stable contact resistance and small temperature rise. Its anti-welding ability increases with the increase of graphite content, but the resistance will also change accordingly. Larger, poorer conductivity. Compared with the ordinary vertical structure silver graphite material, the parallel structure silver graphite material not only changes the structure of the material, but also changes the movement mode of electrons in the current; the processing method of the parallel structure silver graphite material is different from that of the ordinary vertical structure silver graphite material. Materials, in the production and preparation of large-scale silver-graphite contacts, it can obtain silver-graphite materials that are denser than ordinary vertical-structure silver-graphite materials.
