According to our (Global Info Research) latest study, the global Silver Impregnated Activated Carbon market size was valued at USD 22 million in 2023 and is forecast to a readjusted size of USD 29 million by 2030 with a CAGR of 4.0% during review period.

Silver impregnated activated carbon is a new technology air purification product that exchanges silver ions into the micropores of activated carbon carbon, and then fixes it at high temperature. Decomposition makes harmful gas decompose into carbon dioxide and water, which can effectively eliminate various odors; silver-impregnated activated carbon completely changes the shortcomings of traditional adsorption-type air purification products that cannot decompose harmful gases. It is an environment-friendly, no secondary pollution, high performance Excellent natural purification product.
