## Abstracts

The global Silver Nitrate Stick market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Silver nitrate is a natural, inorganic chemical compound with antimicrobial properties that has been used in medical applications since the 13th century. It is used as a cauterizing agent and is available as a solution or an applicator stick. The applicator sticks, known as silver nitrate sticks or caustic pencils, contain silver nitrate and potassium nitrate. There are certain brands of silver nitrate sticks that can be bent or shaped to increase ease of access within a target area. The silver nitrate stick is activated by contact with moisture. When applied to wounds, silver nitrate sticks deliver free silver ions to the tissue that form an eschar as they bind to tissue and obstruct vessels.

This report studies the global Silver Nitrate Stick production, demand, key manufacturers, and key regions.
