Silver Oxide Watch Batteries are small electrochemical cells used primarily to power watches and other small electronic devices. The positive electrode material is silver oxide (Ag2O), the negative electrode is zinc (Zn), and the electrolyte is usually alkaline potassium hydroxide (KOH). Silver oxide batteries are widely used in precision electronic devices that require continuous low current power supply due to their high energy density, stable voltage output, and long service life. They have a low self-discharge rate and good anti-leakage performance, ensuring reliable operation and long-term use of the equipment.
