According to our (Global Info Research) latest study, the global SiMiP (Silicon-Based Micro-LED) Display market size was valued at US\$ 67.47 million in 2025 and is forecast to a readjusted size of US\$ 693 million by 2032 with a CAGR of 39.4% during review period.

SiMiP (Silicon-Based Micro-LED) display is a display solution based on silicon substrate-packaged micro-LED technology, achieving full-color display by integrating red, green, and blue primary color pixels on a single chip. This technology simplifies traditional mass transfer and repair processes, significantly improving production yield and reducing production costs, while ensuring high consistency in pixel emission wavelength, operating voltage, and light distribution, fundamentally solving the color shift problem. SiMiP displays feature high brightness, high resolution, low power consumption, and miniaturization, making them suitable for applications such as microdisplays, wearable devices, AR/VR headsets, and micro-projection light sources. In 2025, global SiMiP Silicon-Based Micro-LED displays were in the early stages of mass production, with estimated global shipments of approximately 60,000 units, an average price of approximately US\$1092.92 per unit, and a gross margin of approximately 25%.

SiMiP display technology is currently in the small-batch pilot production stage, primarily focused on high-end microdisplay applications and the AR/VR wearable device market. The core objectives of the pilot production phase include verifying the process stability of single-chip RGB integration, evaluating packaging consistency and thermal management performance, and optimizing module yield and system integration efficiency. As the manufacturing process matures, through-yield is expected to improve

significantly, thereby reducing the cost per screen. During pilot production, the market is primarily driven by demand from early-stage high-end consumer electronics manufacturers, while test feedback will guide subsequent mass production design and scale-up. Initially, prices will remain higher than traditional Micro-LED display modules, but with process optimization and mass production scaling, unit costs are expected to decrease, further driving the penetration of SiMiP displays in the micro-display and portable display markets.
