## Abstracts

According to our (Global Info Research) latest study, the global Simple Smart Contracts market size was valued at US\$ 885 million in 2025 and is forecast to a readjusted size of US\$ 2906 million by 2032 with a CAGR of 18.2% during review period.

The gross profit margin of major companies in the industry was approximately 55%–82%. Simple Smart Contracts are lightweight blockchain-based programs that automatically execute predefined business logic when specified conditions are met. They are widely used in digital payments, token issuance, supply chain management, decentralized finance, and digital asset management. The upstream industry includes blockchain infrastructure, development frameworks, cryptographic libraries, and cloud computing resources. Midstream covers contract development, auditing, testing, and deployment. Downstream applications include finance, digital identity, logistics, gaming, and enterprise automation.

Simple smart contracts automatically execute preset transaction terms on blockchain platforms without intermediate third-party supervision, featuring transparent rules and tamper resistance. Digital asset circulation and supply chain finance development expand market demand. Iterative versions simplify deployment steps and strengthen transaction risk screening logic.
