Simultaneous biaxially oriented nylon film is a high-performance plastic film made through a special synchronous biaxially oriented process. Unlike traditional sequential biaxially oriented nylon film, sBOPA is stretched both horizontally and vertically during the stretching process, which allows the molecular chains of the material to be evenly arranged in two directions, thus giving the film better mechanical properties, optical properties and thermal stability. This film is widely used in many fields such as food packaging, electronic product protection, and medical product packaging.
