Abstracts

The global Singel-Use Digital Flexible Cystoscope market size is expected to reach \$ 249 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Disposable flexible electronic cystoscopes are sterile, flexible electronic endoscopes inserted through the urethra into the lower urinary tract. They allow for real-time observation of the urethra and bladder using a front-end imaging module and light source, and can be used for urological examinations, diagnosis, and some treatment procedures.

Upstream components mainly include CMOS/image sensors, LED light sources, catheters and polymer materials, steering mechanisms, working channel components, sterilization packaging, and display processing units; downstream applications primarily include hospital urology departments, outpatient centers, specialist clinics, and primary healthcare institutions.

The global unit price of a disposable flexible electronic cystoscope is \$6,372, with annual sales of approximately 29,000 units and a global production capacity of 40,000 units. The industry profit margin is 20%.

In the future, the global market for disposable flexible electronic cystoscopes will continue to develop towards high-definition imaging, ease of operation, outpatient use, and infection control. As the product's applicability in hospital and medical office settings increases, and more manufacturers continue to obtain FDA and CE approvals, market penetration is expected to rise. At the same time, clinicians will place greater emphasis on the immediate use of medical devices, reducing reliance on re-disinfection and

maintenance, improving process efficiency and patient turnover capacity, and industry competition will gradually shift from the sale of single medical devices to comprehensive solutions of 'endoscopic body + display platform + consumables/services'.
