## Abstracts

According to our (Global Info Research) latest study, the global Single 4D Imaging Radar market size was valued at US\$ 346 million in 2025 and is forecast to a readjusted size of US\$ 1264 million by 2032 with a CAGR of 20.4% during review period.

Single 4D Imaging Radar is a highly integrated radar solution that combines RF front-end circuits, digital signal processing, and 4D imaging capabilities on a single CMOS chip, enabling simultaneous detection of range, velocity, angle, and elevation with high resolution. It delivers compact architecture, low power consumption, and consistent signal performance while supporting advanced perception functions such as object contour reconstruction and dynamic environment mapping for automotive applications. In 2025, production was approximately 7.63 million units and the average price was USD 44 per unit. The industry's capacity utilization rate in 2025 was about 60% and the average gross margin was around 55%. Upstream, the most critical inputs include silicon wafers, photoresists, lithography machines, and etching tools, with representative suppliers such as ASML, Tokyo Electron, and Applied Materials providing essential semiconductor equipment and materials. The midstream segment includes system architecture design, RF front-end and baseband integration, 4D imaging algorithm development, digital signal processing, mixed-signal verification, and SoC-level functional integration, which together define imaging resolution, computational capability, and radar performance. Downstream, Single 4D Imaging Radar is used by angle radar and forward radar manufacturers such as Bosch, Continental, Aptiv, Valeo, Denso, ZF, and Huawei.

In the process of the evolution to a higher level of intelligence, traditional millimeter-

wave radars can no longer meet the needs. Its perception information only contains distance and orientation, lacking height parameters, and cannot form high-density point cloud imaging, which makes it difficult to identify road targets. Although lidar with high-density point cloud imaging capability can solve the pain points of traditional millimeter-wave radar, the cost of lidar is high, and there are natural defects that cannot work around the clock. Therefore, 4D imaging radar has attracted the attention of the industry.
